

WHO WANTS WHAT

the smart way to field your staff

WHAT IT IS

- ▶ A platform to make field service and on-demand businesses competitive in the modern connected marketplace.
- ▶ Tools to allow businesses to stay connected with their field providers.
- ▶ The ability for customers to request services and receive updates in real-time.

FOUNDATION

- ▶ Our platform is built on a cloud based architecture where we expose the full API to our clients. The server API can be deployed either hosted by us or by the customer, as it is fully contained.
- ▶ All requests and responses are done via standard calls over standard protocols.
- ▶ Best practice security has been part of development from the ground up, and standard authorization methods gets implemented as required in each vertical.

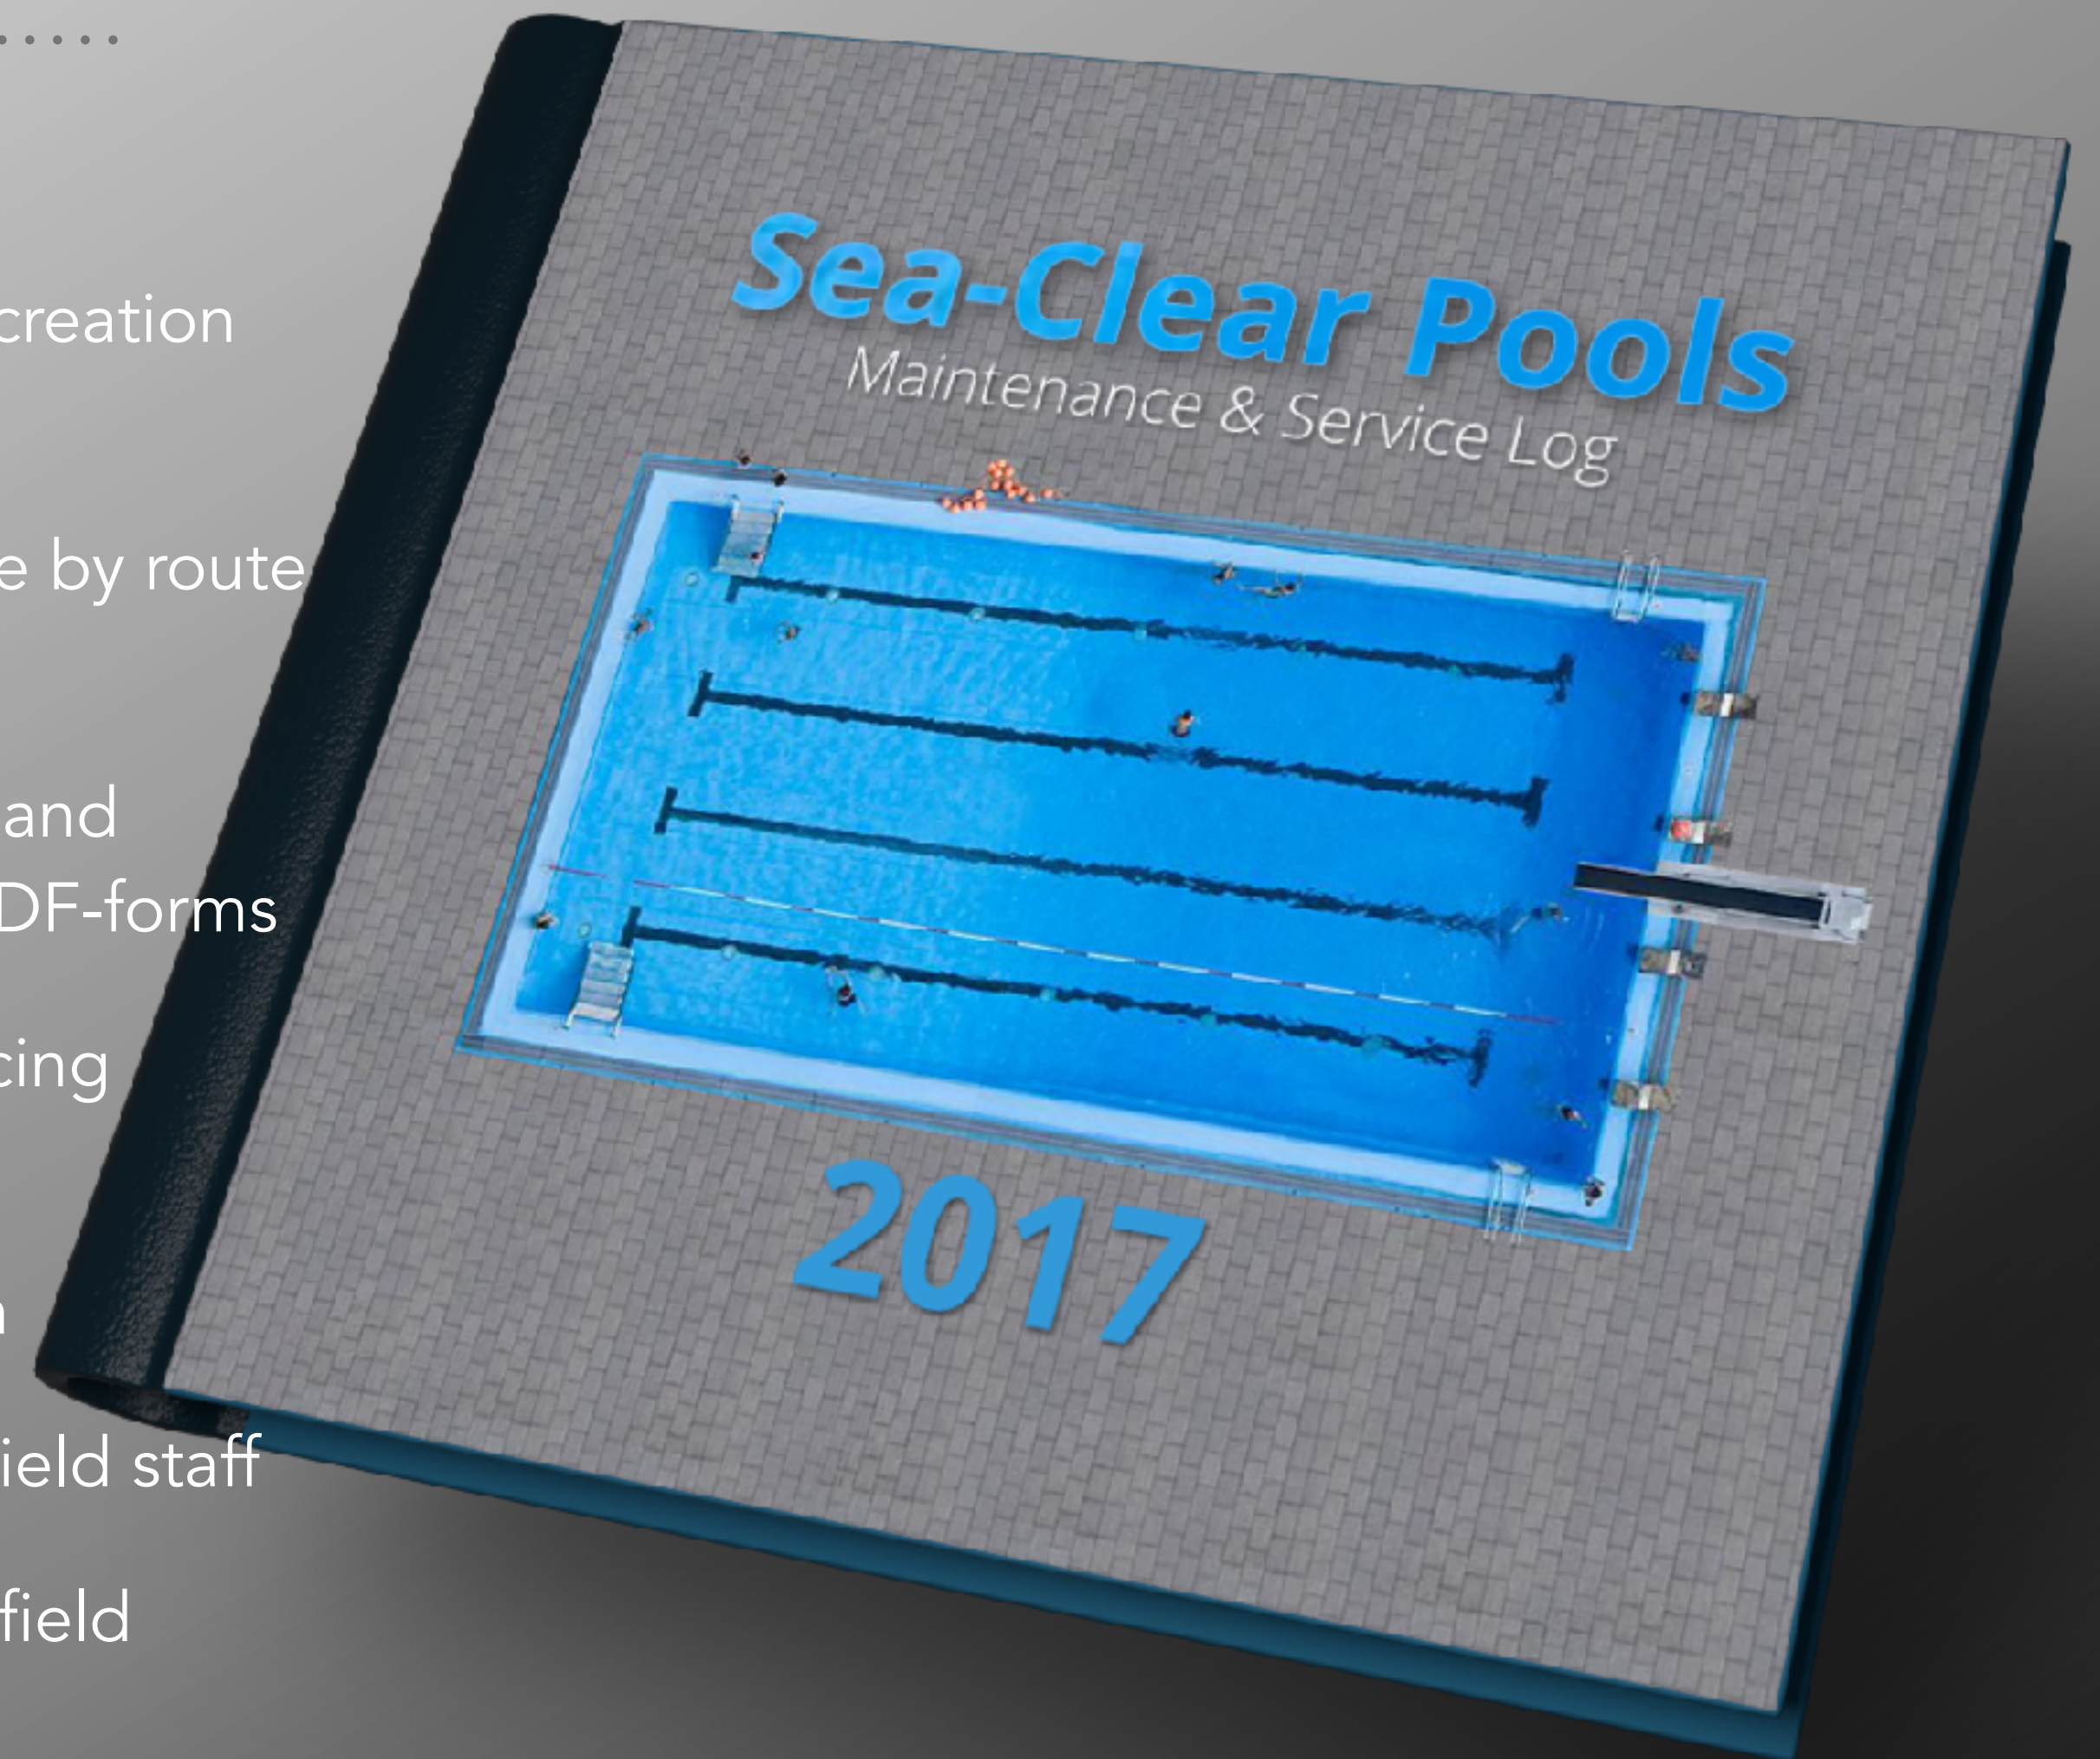

SEA CLEAR - A VERTI(CAL)

.....

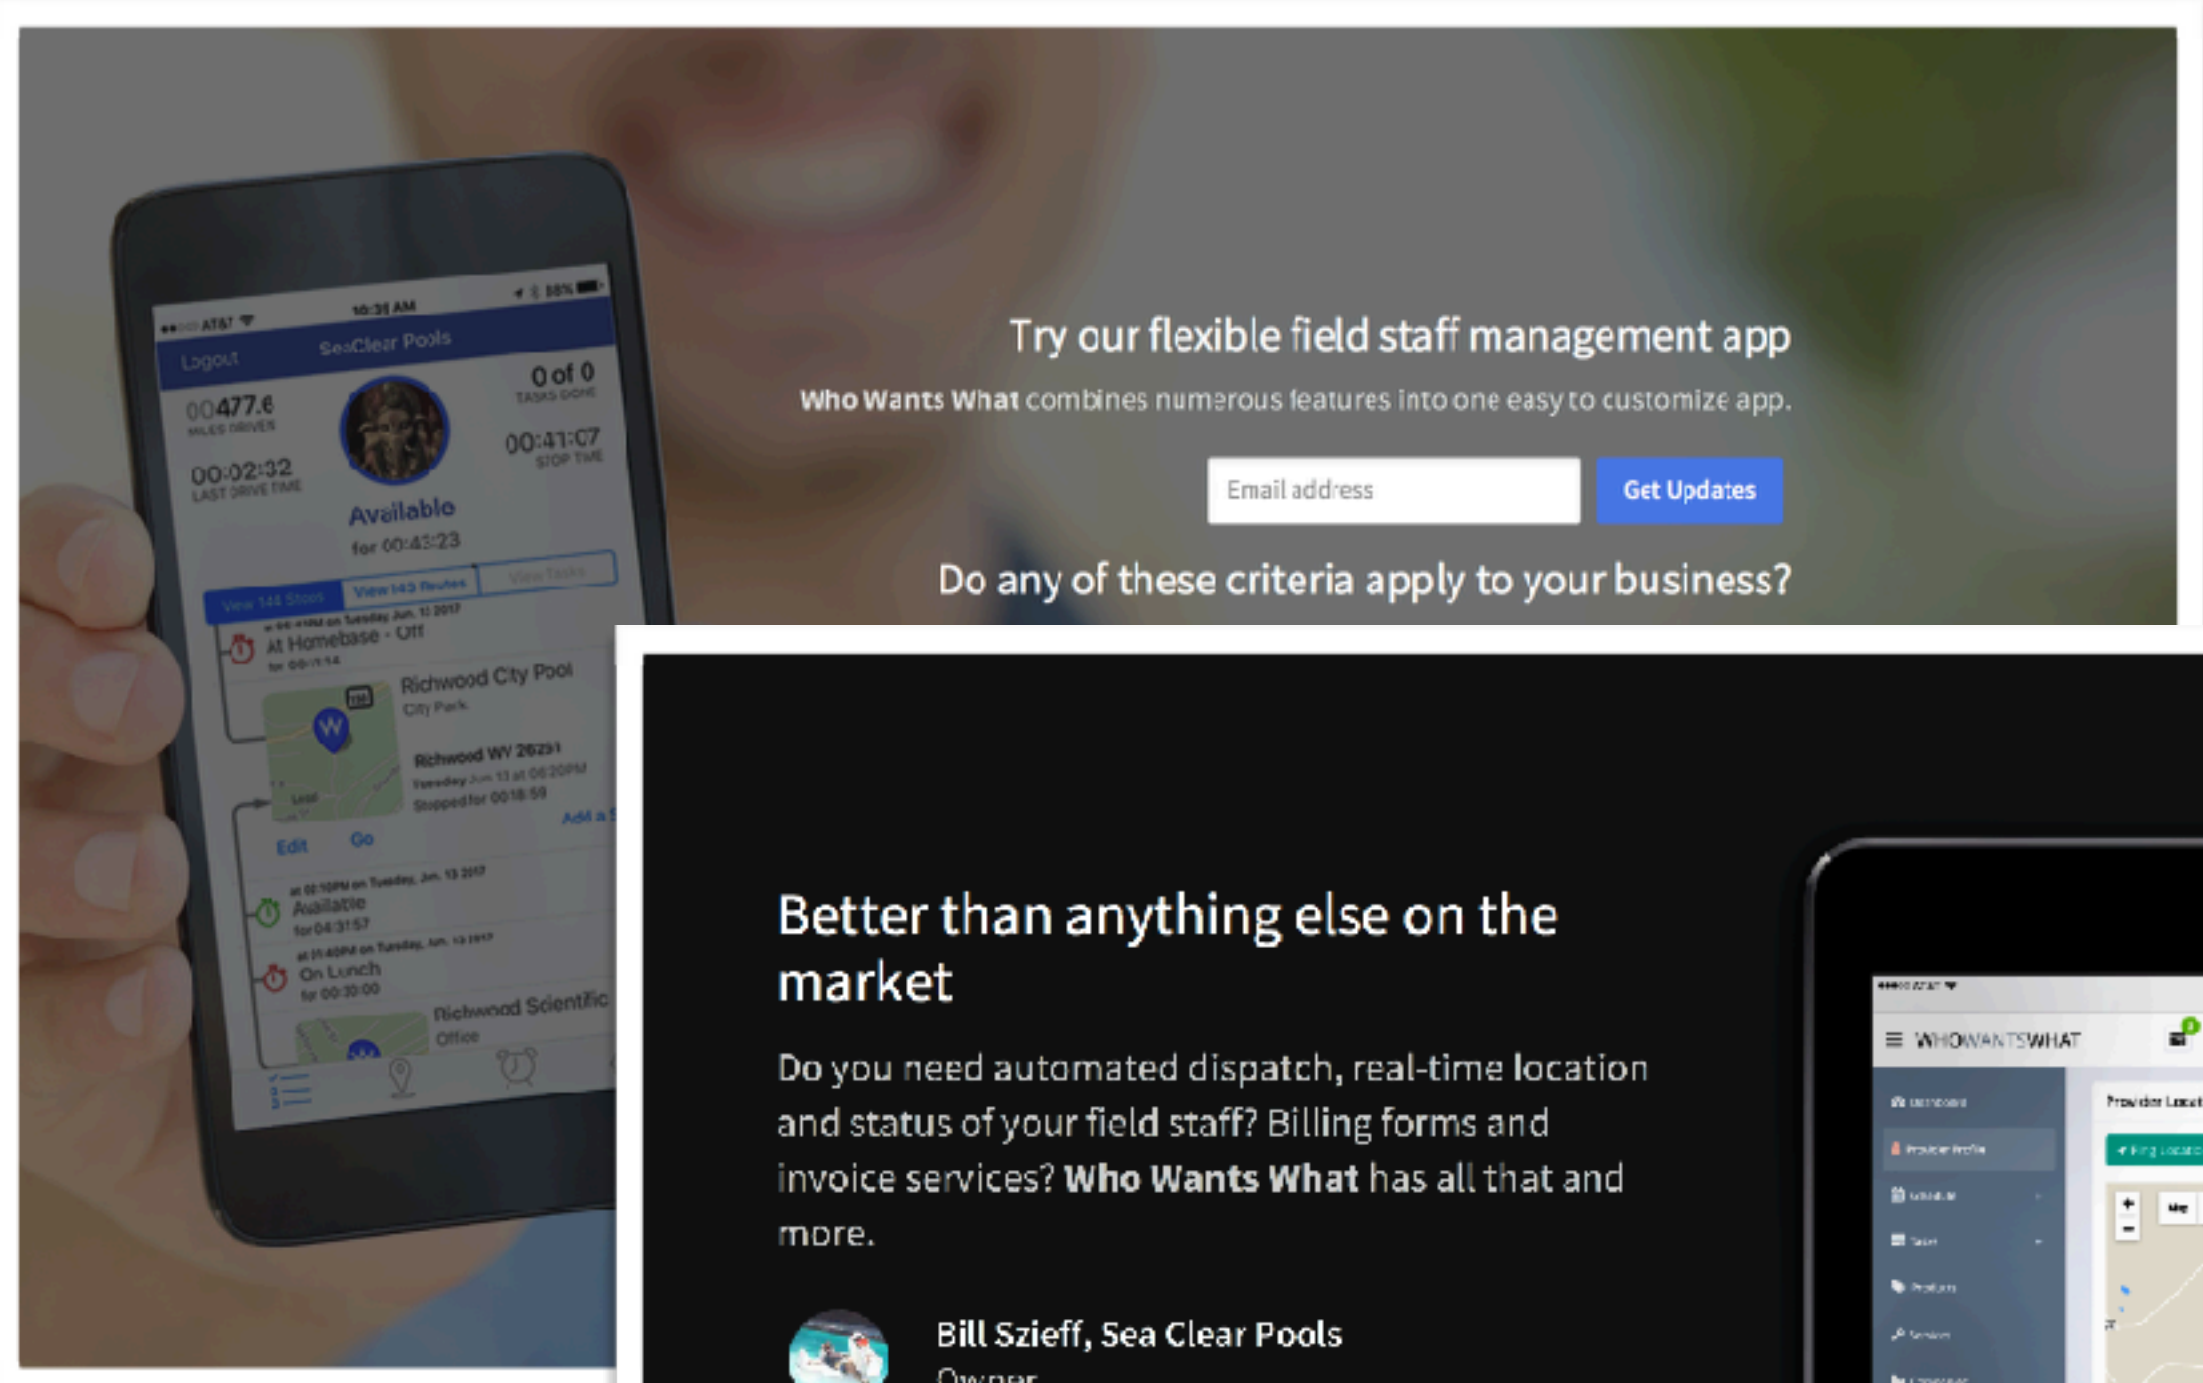

Our pool industry application features:

- ▶ Automated high resolution time card creation with travel time
- ▶ Real-time location tracking with milage by route and vehicle
- ▶ Customized, update-able, searchable and shareable location-based notes and PDF-forms
- ▶ Automated reports and data for invoicing and billing
- ▶ Built in inventory management system
- ▶ Predictive and automatic dispatch of field staff
- ▶ In-app communication between both field staffers and office

Do any of these criteria apply to your business?

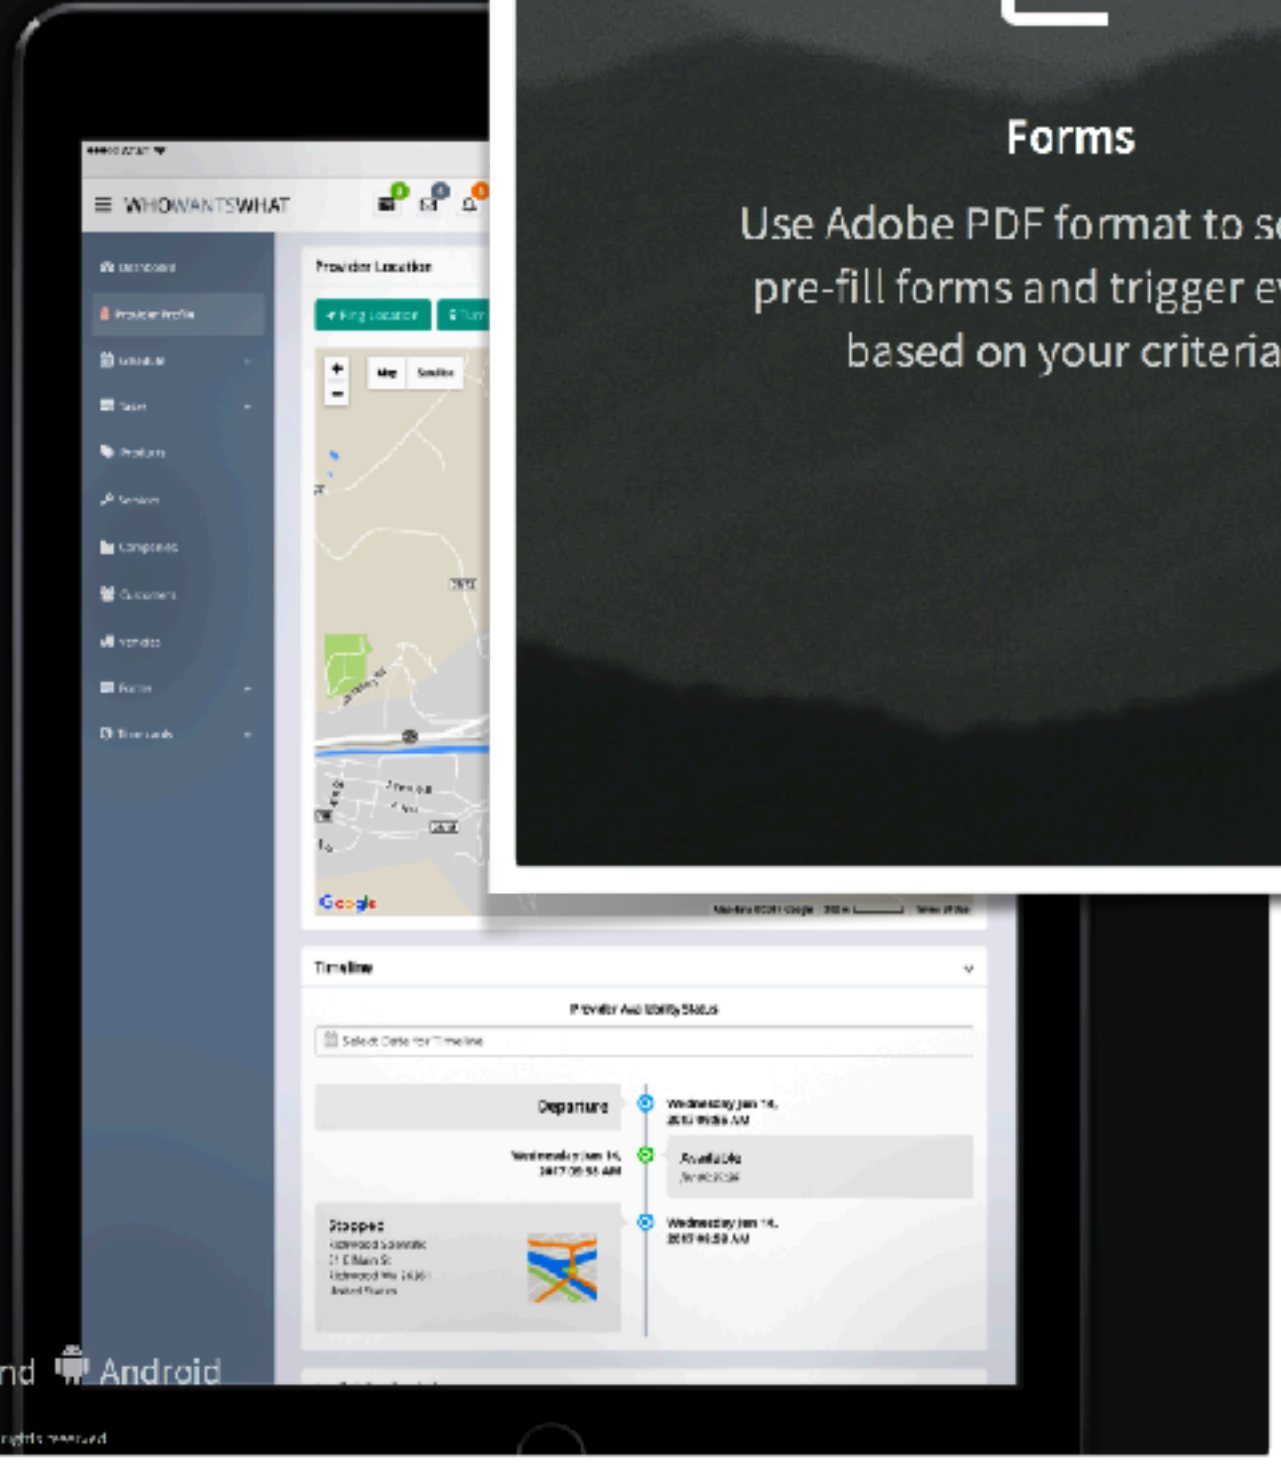

Better than anything else on the market

Do you need automated dispatch, real-time location and status of your field staff? Billing forms and invoice services? **Who Wants What** has all that and more.

Bill Szieff, Sea Clear Pools
Owner

«I've been using the iOS version of Who Wants What for over a year now. It has greatly decreased the amount of paperwork we have to do and saved my company time and money. It's easier to invoice clients, track our employees, and manage time cards. It's made managing my business so much simpler.»

Features

During this demo, you will learn the features that set our product apart.

Location

Track field staff location in real-time with customizable parameters for vehicle, bike and/or foot travel. Obtain mileage by route, vehicle or both. Share routes or export to external software.

Time Card

Automatically or manually clock field staff in/out, set their status, and alert them to take breaks. Track individual or group time offline or in real-time.

Dispatch

Predictively dispatch field staff automatically or manually through software. Accept or deny tasks. Simultaneously send updated changes to the consumer.

Forms

Use Adobe PDF format to search, pre-fill forms and trigger events based on your criteria.
